## Abstract

Thesis: 54 pages, 41 of sources, 4 tables, 5 figures.

Analysis of biologically active substances of phenolic nature in the lilac collection of CBG NASB

Keywords: *Syringa* L., collection, antioxidant activity, syringin. Objects of research: *S. vulgaris* L., *S. amurensis*, *S. josikaea*, *S. sweginzowii*, *S. wolfii*, *S. emodi*, *S. pekinensis*.

Subject of research: compounds of phenolic nature and their antioxidant activity in extracts of *Syringa* L.

Objective: to study the quantitative composition and antioxidant activity of phenolic substances of nature in extracts of *Syringa* L.

The work is performed on the basis of the laboratory of applied biochemistry, CBS, NAS of Belarus and the Institute of Bioorganic chemistry of NAS of Belarus. Research methods: biochemical, morphological, and statistical. Practical relevance: the identification of promising species of the genus *Syringa* L. from the collection of CBG NASB as a source of biologically active substances of phenolic nature (in particular syringin).
